

Integrated Cellular Blind CHAIN MAGNETIC SYSTEM

Chain Magnetic System is a manually-operated magnetic system with raising and lowering functions for cellular blinds encapsulated within 24mm cavity double glazing units.

By pulling the chain of the magnetic controlling unit fixed on the glazing, the magnetic mechanism in the headrail in the glazing moves.

Since it can completely obscure the room, due to its black-out feature, it is preferred where higher daylight control is desired.

Since it's a double-sided fabric with a honeycomb shape, no cords or holes are visible. Only the fabric itself is visible.

The system can be supplied either with warm edge or aluminum spacer bars according to demand.

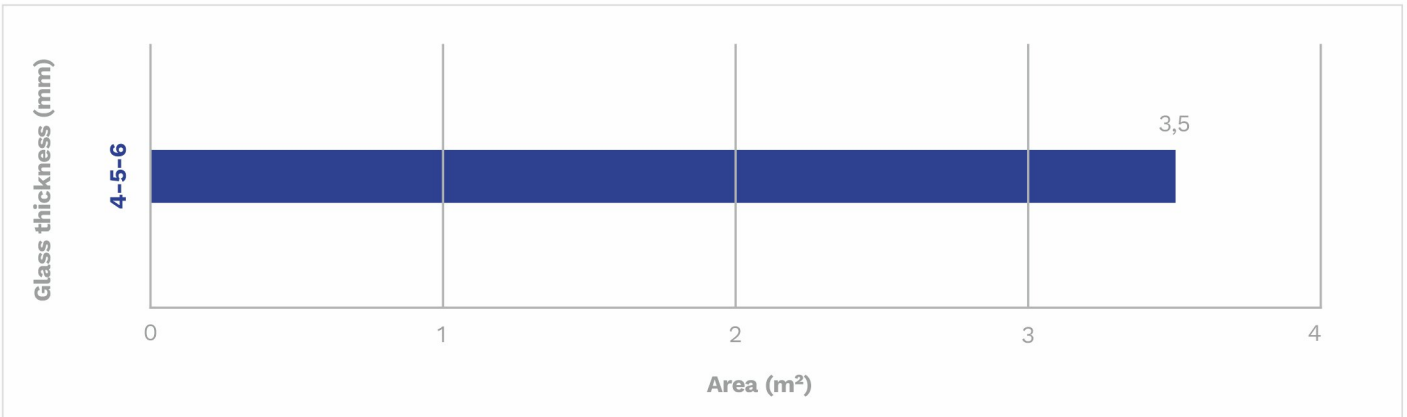

The position of the cellular blind between insulated double glazing prevents any physical intervention. It also ensures that

the blind is not dusted, contaminated, or affected by weather conditions. Thus, it does not require any maintenance and cleaning.

Suitable for every type of window frame.

FEASIBILITY CHARTS

Possible Dimensions

W min = 250 mm * W max = 2000 mm
H min = 300 mm H max = 3500 mm

* When the width is less than 350 mm, the height shall not exceed 1300 mm.
